

## Information about apuli-lib's performance

in terms of speed and accuracy. What matters is minimizing the amount of guesses required to finding the correct aswer And the speed of the algorithm (mainly that it is implemented in a reasonable way) And obviously that the program doesn't give wrong answers

### Benchmarks

Version, revision	Number of solved games	Average guess count
0.1.0, 1	5 : 1366/3085 6 : 0/4221	4.091734197730956
0.1.0, 2	5 : 0/3085 6 : 0/4221	12 (to do)
